

Beginner Level Task...

TASK -4 Image to Pencil Sketch with Python:

We need to read the image in RBG format and then convert it to a grayscale image. This will turn an image into a classic black and white photo. Then the next thing to do is invert the grayscale image also called negative image, this will be our inverted grayscale image. Inversion can be used to enhance details. Then we can finally create the pencil sketch by mixing the grayscale image with the inverted blurry image. This can be done by dividing the grayscale image by the inverted blurry image. Since images are just arrays, we can easily do this programmatically using the divide function from the cv2 library in Python.

Name Neha Tripathi

1. Importing Required Libraries

In [7]:

```
import cv2
import matplotlib.pyplot as plt
%matplotlib inline
def show(title,img,cmap='RdGy'):
    plt.imshow(img,cmap=cmap)
    plt.title(title)
```

2. Loading Image

In [9]:

```
image=plt.imread("Neha.jpeg")
show("Neha.jpeg",image,'RdGy')
```

3. Convert Into GrayScale Image

In [10]:

```
gray_image=cv2.cvtColor(image,cv2.COLOR_RGB2GRAY)
show("Gray_image",gray_image,'gray')
```

3. Invert The GrayScale Image

In [11]:

```
Inverted_Image =255-gray_image
show("Inverted_Image",Inverted_Image,'gray')
```

4. Blur The Inverted Image

In [12]:

```
Blurred_Image =cv2.GaussianBlur(Inverted_Image,(21,21),0)
show("Blurred_Image",Blurred_Image,'gray')
```

5. Create Pencil Sketch Image

In [13]:

```
Inverted_Blurred=255-Blurred_Image
Pencil_Sketch=cv2.divide(gray_image,Inverted_Blurred,scale=256.0)
show("Pencil_Sketch",Pencil_Sketch,'gray')
```

THANK YOU!!
